

Short-Term Training. A Lifelong Career.

*We've always had a way
with teaching technology.*

BEDROCK
Learning

Team with **BEDROCK** Learning

Bedrock Learning emerged in 2004 from 25+ years in the connected home industry, and as a result of education, training, and business experience.

Internationally recognized industry pioneer, and Bedrock founder, Helen Heneveld, now leads the team in simplifying technology. The full curriculum and service offerings empower technicians and help everyone to succeed in the industry.

OUR PHILOSOPHY AND COMMITMENT

Learning should be fun and fit into your busy schedule.

Training should be available anytime, anywhere, for anyone, and presented in 'plain English' with easy-to-understand graphics, animations, and videos at a level everyone can grasp.

The Bedrock team has always had a way with teaching technology. We make learning happen.

PREPARE FOR A CAREER

Our online courses cover the technology behind the products, allowing manufacturers to focus training on their products.

Courses prepare for field work and industry certifications such as:

- ESPA Certified-EST, Electronic Systems Technician
- CEDIA Certifications: ESC, ESC-T, ESC-D, ESC-N
- ETA-RESI, Residential Electronic Systems Integrator

Training and knowledge are verified by quizzes and final tests.

Achievements are documented with *Certificates of Completion*.

CONTACT US

We have the solutions and are eager to help you learn and succeed.

Online Courses

Learn the Technology Behind the Products

- **Affordable** – no travel or time off
- **Convenient** – learn any time, 24/7
- **Effective** – practical technical knowledge
- **Robust** – all-encompassing curriculum
- **Verifiable** – Tests ensure comprehension

Add value with educated and trained salespeople and technicians. Increase productivity, boost sales, and build the bottom line. Earn CEU's, broaden skills, and keep current with technology.

Assessment Tests

Do technicians really know their stuff? Test them and see!

Find out what prospective employees and current team members know about installation and popular technologies.

Verify with three separate 50-question Tests and identify where training is needed.

1. Installation Test

- Construction Methods
- Cables and Connectors
- Installation Techniques
- Hand and Power Tools
- Jobsite Safety
- Codes and Standards

2. Home Networking Test

- Components
- TCP/IP Concepts
- Configuration
- Set Up and Attached Devices
- IP Addressing
- Network Security

3. Audio/Video Test

- A/V Technologies
- A/V Distribution
- A/V Installation
- Signals and Formats
- A/V Amplification
- A/V Calibration

BUNDLE OF THREE TESTS \$39_{US}

The Connected Home

*Readily Understood by Everyone
in this Non-technical Course*

4 HOUR ONLINE COURSE \$99^{US}

This engaging introduction to the digital home is designed for anyone new to the industry or interested in the growing market opportunities. Students learn about systems, capabilities, benefits, and technical infrastructure that deliver integration of products and services. Gain an explanation and appreciation

of the Internet of Things in this easy-to-understand orientation to the industry and innovations changing the way we live, work, and play, as well as a glimpse into the future.

OBJECTIVES

- Share dramatic changes in the connected world
- Explain the IoT, Internet of Things
- Identify home technology categories, systems, and benefits
- Explain integration of home systems
- Describe incorporating technologies into a home
- List the players in the home technology industry
- Identify responsibilities of players and stakeholders

Fundamentals for ESTs

*Build a Solid Knowledge Foundation
for Installing 21st Century Digital Solutions*

8 HOUR ONLINE COURSE \$149_{US}

This all-inclusive course delivers a solid foundation of knowledge every low voltage technician working in the industry must have. Students learn about the different methods of construction, electrical basics, job site safety, tools, industry standards, and more.

Technical principles of structured wiring including cabling, components, and outlets are explained, along with design and installation procedures, testing, and troubleshooting methods. Technicians start a career here.

OBJECTIVES

- Identify residential electronic systems and their benefits
- Recognize different methods of residential construction
- Create a safe working environment on the jobsite
- Use project plans and documents
- Pre-wire and document a structured wiring system
- Terminate cables and attach connectors
- Test and troubleshoot a structured wiring system

Networking for Technicians

*Gain a Solid Understanding
of Components, Devices, Cabling,
TCP/IP, and IP Addressing*

8 HOUR ONLINE COURSE \$149_{US}

Designed specifically for ESTs, short for Electronic Systems Technicians; this easy-to-understand course demystifies TCP/IP and IP addressing. Acquire the knowledge necessary to connect and integrate the many different network products and online services available today. Learn networking principles, the many acronyms and what they each mean, along with components, networked devices, design, installation, setup, configuration, and network security.

OBJECTIVES

- Identify the benefits of home networking
- Explain the technology fundamentals of networking
- List what questions to ask the clients
- Describe the elements of a network design plan
- Explain the steps to install and configure a home network
- Explain and implement fundamental network security
- Identify basic network testing and troubleshooting techniques

Multi-Room Audio

Explore Principles of Sound, Distribution, Components, Speakers, and More

6 HOUR ONLINE COURSE \$149_{US}

Grasp the fundamentals and key principles of audio and multi-room audio distribution. This course covers sound technology, source components, distribution and amplification equipment, speakers and control options. Know the difference between line level and speaker level signals and wiring for each. Discover how to calculate impedance and amplifier/speaker performance, choose the appropriate speakers based on listening preferences, and select components for multi-room audio.

OBJECTIVES

- Identify the options and components of multi-room audio
- List the planning steps of a multi-room audio system
- Calculate speaker impedance and system power needs
- Illustrate the relationship between amplifier power and sound pressure level
- Explain the installation steps involved in the pre-wire, trim-out, and final installation phases

Home Theater Explained

Examine Principles of Audio and Video Signals, Formats, Reproduction, and Maximize Theater Performance

4 HOUR ONLINE COURSE **\$99^{US}**

Create the best home theater experience possible. Understand key concepts; aspect ratio, resolution, audio/video formats, and signal reproduction. Appreciate features and benefits of different types of speakers, displays, projectors, screens, receivers, amplifiers, and power conditioning equipment. Make sense of sources and signals; analog, digital, cable, satellite, and stored media. Learn about streaming media and delivery possibilities. Understand system design, installation, and video and audio calibration to maximize performance.

OBJECTIVES

- Explain the technology fundamentals of home theater signals, displays, audio reproduction, and signal processing
- Share the different surround sound formats
- Identify design and planning steps for a home theater
- List specific steps in the pre-wire, trim-out, and final installation phases
- Explain how to calibrate a home theater system

Lighting Control

*Identify Fixtures, Lamp Types,
Wiring, Programming,
and Control Options*

8 HOUR ONLINE COURSE \$149_{US}

Get up to speed on this popular trend, and “Go Green” with lighting control. Gain a solid foundation on lighting fixtures, lamp types, wiring, switching, dimming, control devices, and important safety considerations. Explore control communication options including wired, wireless, PLC (powerline control), Zigbee, Z-Wave, proprietary, and more. Learn design steps, installation procedures, programming, testing, and troubleshooting for successful installations.

OBJECTIVES

- Explain technology principles and benefits of lighting control
- Identify methods of switching, dimming, and control
- Name different lighting, fixture, and lamp types
- Follow steps to design and install a lighting control system
- Identify commonly used options for programmed control
- Explain how to program a lighting control system
- Use lighting control troubleshooting techniques

Security and Access Control

*Learn Key Principles of Security
Detection and Protection Systems*

8 HOUR ONLINE COURSE \$149_{US}

Gain a good understanding of the fundamentals. Topics discussed include cabling, components, and wireless security systems. Learn the different types of contacts and sensors for detection, fire and safety protection, along with access control methods and locking mechanisms. This course provides practical information needed for design, installation, programming, and troubleshooting security and access control installation projects.

OBJECTIVES

- Explain the technology principles and benefits of security detection/protection and access control systems
- Identify different security contact and sensor types
- Name different methods of access control
- List steps to design, install, and set up a security system or access control system
- Explain programming a security or access control system

Project Management

*Improve Performance and Profitability;
from Sales through Follow-up*

PM COURSE PACKAGE

\$299^{US}

This powerful course shares the secrets and skills necessary for any low-voltage installation company to implement a successful project management system. Explore procedures, forms, and documents to get organized, streamline processes, increase efficiency, sharpen recordkeeping, and improve communication.

Includes:

- 6 hour Online Course
- Forms CD
- printed Course Guide

OBJECTIVES

- Share an overview and the benefits of project management
- Explain the importance of on-time, on budget, quality work
- Identify the phases, workflow, and tasks of a project
- Use forms and documents to get projects under control
- Describe processes and procedures of project management
- Implement tools to accomplish a project from start to finish
- Manage budget, purchasing, changes, and documentation

Selling Skills Courses

2 hour Online Courses

\$89us each

CUSTOMER SERVICE AND UPSELLING SKILLS

Competition is fierce. Separate yourself from others by how your customers are treated. Empower technicians and salespeople with the right skills to portray a professional image, communicate, and solidify happy, loyal customers. Upsell clients on every visit and increase bottom line revenues.

MAKE MORE MONEY WITH REFERRALS

Capitalize on opportunities your current relationships bring you. Referrals produce the highest level of results with the least amount of effort. Learn three steps to easy referrals, the most progressive techniques to make them happen, and how to create your own customer priority program.

BUILDING ALLIANCES: HOW TO GET LEADS

Building alliances to help discover good leads isn't easy. Learn simple, effective, step-by-step processes to avoid pitfalls of dead-end partnerships and produce the revenue you deserve. It's time to build a network of individuals who willingly hand qualified leads to you.

COLD CALLING: GET BOOKED APPOINTMENTS

One of the most disliked sales activities is cold calling. Get set up for success, strengthen your resilience and confidence, and learn step-by-step processes to ensure positive results when cold calling in the field and on the phone. Target customers, create appointments, and increase sales TODAY.
